

# Utilities and Green Power Monitoring

## Problem:

Lack of communication to remote devices increases chance of long-term outages and prevents early detection of degraded performance

## Solution:

SIXNET's R.A.M. allows for early detection of issues, real-time alarming and data retrieval and increased ability to change parameters of remote devices

## Benefits to you:

Increased Maintenance Adherence - Less major repairs

Reduced Site Visits - Lower labor and vehicles costs

Available Serial and Ethernet Ports - Communication to legacy/new devices
