

SIXNET

SXIPM-SNMP - SNMP for I/O & Network Management

Obtain valuable network management information or read/write I/O from the SNMP agent (Simple Network Management Protocol) in your IPm controllers or RTUs.

A Rules Wizard (see image below) in the SXT00L Kit configures the SNMP agent that has been integrated into the IPm firmware. The I/O Tool Kit v2.2 and IPm firmware v1.5 or later are required and may be downloaded at no charge. Registered SXT00L Kit users may purchase a license to use this add-on management software directly from SIXNET. This one license may be used with any number of IPm units owned by the same licensee.
